

# Numeracy in Retail Cash Handling

## Worksheet

View the video attentively. As you watch, complete the following questions and calculations. For all calculations, do not use a calculator and show all working.

1. A pair of shoes at a vintage market is priced at £37.85. Follow the calculations below to work out how much change a customer purchasing these shoes would need.
  - a) If the customer pays with a £50 note, how much change must they be given?

- b) When the change is given, what is the least number of notes and coins that can be handed over to the customer and what are they?

2. Some customers like to use up their loose change, which clears their wallet or purse of coins.

a) If the customer wants to use up their loose change and pays with a £50 note and 85 p in coins, how much change must they be given?

b) When the change is given, what is the least number of notes and coins that can be handed over to the customer and what are they?
